The Copper Braids are usually made in

- 36 Gauge SWG (0.02927 Sqmm per Wire i.e 0.193 wire diameter) - Standard
- 39 Gauge SWG (0.0137 Sqmm per Wire i.e 0.132 wire diameter)
- 42 Gauge SWG (0.008107per Wire i.e 0.102 wire diameter)

**More the Gauge SWG – More will be Flexibility**

P.N-Current rating measured at 35°C room temperature and max. permitted Conductor Temp of 70°C, Since several influencing factors generally apply, the value specified for current rating must be considered as non-binding guideline values.

We offer a wide choice of **Flexible Braided Copper** types (flat, round, rope and layered), strand sizes, finishes, termination options (crimped, pressed and swaged), insulation and identification. Our highly flexible earthing connectors and earth leads are commonly used in switchgear, building services and a wide range of industries. We offer competitive pricing and ex-stock or short lead time deliveries. These can be made from electrolytic copper Cu-ETP (grade C101) or from oxygen free copper

Even though many of our products are standard items, we also make special tailor made products made exactly to the requirements of our customers.

We use the finest quality material of **Flexible Braided Copper** to ensure consistency of quality and performance, drawing on our supplier's decades of experience in drawing, stranding and braiding, as well as surface treatment.

#### **Flexible Braided Copper Construction**

The construction of Copper braid is usually written as:

48 / 30 / 0.15, where:

48 = the number of carriers

30 =the number of wires per carrier

0.15 = the diameter of each wire in mm

The cross sectional area (CSA) of a copper braid can be calculated from this information:

$(\text{Carriers} \times \text{wires per carrier} \times \text{wire diameter}^2 \times 3.142) / 4$

So, for a copper braid with the specification: 48 / 30 / 0.15, this would be:

$$48 \times 30 \times 0.15^2 \times 3.142 / 4 = 101.80 \\ = 25.45 \text{ mm}^2$$

#### **Oxygen Free Flexible Braided Copper**

Oxygen-free high thermal conductivity (OFHC) copper is widely used in cryogenics. OFHC is produced by the direct conversion of selected refined cathodes and castings under carefully controlled conditions to prevent contamination of the pure oxygen-free metal during processing. The method of producing OFHC copper insures extra high grade of metal with a copper content of 99.99%.

With so small a content of extraneous elements, the inherent properties of elemental copper are brought forth to a high degree. Characteristics are high ductility, high electrical and thermal conductivity, high impact strength, good creep resistance, ease of welding, and low relative volatility under high vacuum. We supply a range of oxygen free copper for use in scientific, industrial and medical processes.

- Copper alloy 10100 oxygen free copper, also known in Europe as Cu-OF or CW008A to EN13601.
- Composition: Copper 99.99 %, Trillium 0.001 %
- Hardness: B30 - 40
- Conductivity: 101 %
- Tensile strength: 25 - 40 Ksi
